## Objective

---

- A passionate Computer Science undergraduate seeking opportunities in software development where I can apply my programming and problem-solving skills, gain real-world experience in building scalable web applications, and contribute to the growth of the organization while continuously enhancing my own professional development.

## Education

---

|                                                                   |                          |
|-------------------------------------------------------------------|--------------------------|
| <b>SR University</b> , Bachelor of Technology in Computer Science | October 2022 – July 2026 |
| • GPA: 8.9/10.0                                                   |                          |
| <b>Alphores Junior College</b> , Intermediate                     | October 2020 – July 2022 |
| • Percentage: 90.5                                                |                          |
| <b>Saketha High School</b> , SSC                                  | March 2019 - 2020        |
| • GPA: 10/10                                                      |                          |

## Experience

---

|                                                                                                                                                                                    |                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>AICTE Virtual Internship</b>                                                                                                                                                    | Jan 2024             |
| • The AICTE Google AIML Virtual Internship is a two-month online program in which participants work on real-time projects over a period of time.                                   |                      |
| <b>AWS Virtual Internship</b>                                                                                                                                                      | Jul 2024 - Sept 2024 |
| • The AWS academy offered a virtual internship where students are encouraged to develop their skills by learning from the online courses and working on online projects over time. |                      |

## Skills

---

**Programming Skills:** Java, Python, C

**Web Technologies:** HTML, CSS

**Database:** SQL

**Tools:** Visual Studio Code

**Soft Skills:** Communication, Teamwork, Leadership, Analytical Thinking, Commitment, Adaptability

## Projects

---

|                                                                                                                                                                                                                                                        |          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>Sensor based parking assistant system   Sensors, Arduino IDE</b>                                                                                                                                                                                    | Nov 2025 |
| • Developed an autonomous sensor based parking aid system on Arduino with the integration of various ultrasonic sensors, motor controller, and real-time sensors to improve the obstacle detection system and the safety of vehicles.                  |          |
| • This is a project with greater usability of the system with real-time warnings, visual and audible signals, leading to a more user-friendly and natural driver assistance system.                                                                    |          |
| • Enhanced the overall system performance through clean and modular Arduino code, enhanced the performance of the system, enabled maintainability and scalability to future changes that may involve autonomous navigation and mobile app integration. |          |
| <b>Voice Assistant   Python, SpeechRecognition, Pytsx3, WikipediaAPI</b>                                                                                                                                                                               | Aug 2025 |
| • Developed a Python voice assistant. Reacts to user commands such as playing songs on YouTube, telling a joke, giving you the date and time, and accessing Wikipedia.                                                                                 |          |
| • Linked Speech-to-Text to the Google SpeechRecognition API and Text-to-Speech with pytsx3. This enables real-time communication.                                                                                                                      |          |

## **Playfair Simulation and Steganography | HTML , CSS , Cryptography Techniques**

Apr 2025

- Developed a front end project under cryptography .
- Created a responsive front end interface of text and image encryption using playfair cipher for text encryption and steganography for the image encryption and decryption.

## **Netflix | HTML , CSS**

Sep 2023

- Developed a front end page to show the home page of netflix .
- Constructed visually appealing demo of Netflix homepage utilizing HTML, CSS which employed clean code, HTML and an accessible design.

## **Agribot | Sensors , C , Arduino IDE**

Jan 2023

- Developed an Automatic Seed Sowing Agriculture Robot namely "Agribot" which automatically sows the seeds making a farmer's work easier.
- This bot is a demonstration of how technology helps farmers. Here, electronic components and sensors are used to build the bot and the C language is used to implement the code.

## **Achievements**

---

- Led the SRUMUN'25 holding a position of USG-Disciplinary Committee where 50 members were under this committee. I have been recognized in making the event successful and was appreciated.
- Led the council, **Lok Sabha**, as the Scribe, which was the newly introduced council for the first time in SRUMUN'24 and was recognized for the role as the Scribe.
- Led a team in the Inter-College Hackathon conducted by SR University, using Block Chain Technology to develop a secure and transparent supply chain solution; secured fourth place out of 50+ participating teams.

## **Certifications**

---

**MICROSOFT** | Azure AI Fundamentals.

**CISCO** | Networks, Cybersecurity and Wireless essentials.

**AWS** | Cloud Foundations and Data Engineering.

**NPTEL** | Theory Of Computation.
